

RigLock Remote Wellhead Rig-up/Rig-down Equipment

GR Energy Services offers the efficiency and safety of RigLock wellhead rig-up and rig-down equipment. RigLock significantly reduces operating time by quickly connecting and disconnecting the equipment string to the wellhead. And with remote hydraulic actuation,

personnel no longer have to connect equipment dangling above the wellhead by hand, thus reducing the chance of injury.

The RigLock adapter drops in easily with an oversized, highly visible entry guide. Six hydraulic cams seal the connection remotely with the locking ring securing the cams. This process eliminates time-wasting activities such as manually positioning the string to make the connection.

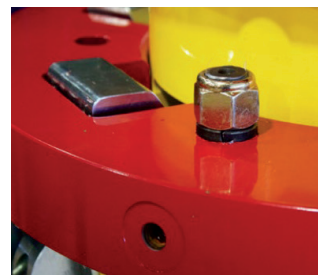

RigLock equipment reduces costly operating time and protects personnel from injuries that can occur during rig-up and rig-down operations.

An oversized, highly visible entry guide ensures proper equipment placement.

Six hydraulic-actuated cams seal the connection remotely, saving the time required to position personnel at the wellhead.

The mechanical locking ring secures the cams in place even during a loss of hydraulic power.

RigLock Remote Wellhead Rig-up/Rig-down Equipment

With remote, hydraulic actuation, RigLock reduces operating time and ensures the safety of personnel working at the wellsite. The locking connection maintains pressure for beginning operations.

The RigLock transport and control module speeds up well work by enabling technicians to quickly and remotely connect and disconnect the tool string, offering efficiency gains that can significantly add up when moving from rig to rig among multiwell operations.
